

300 Metre Fly 'Factory' Class – Melbourne, Wagga & Leeton

A Long Range entry level event with the 'Fly' novelty factor. Both high velocity/low BC and low velocity/high BC can be competitive at this range. This event should satisfy the urge of hunters, varminters and 'tactical' shooters to test their skills in a competitive environment.

The rules have been drafted to reflect what is most commonly used in the field, both in terms of makes and models and common accuracy tweaks.

Rules –

Any standard rifle from a major manufacturer (no catalogued 'Target' models or 'Custom' shop versions). A list of specialist makers whose rifles are excluded is being developed and will be listed below. Single shot models are permitted.

Allowable modifications are limited to action bedding, barrel free-floating, altering length of pull and adjustment, alteration or replacement of trigger (minimum pull weight 500gm). Set triggers are to have the set mode adjusted to 500gm or used in un-set mode.

Stock to retain its original shape and weight. No attachments other than a bi-pod if desired.

Barrel replacement limited to the use of a genuine factory part in either the original or other catalogued calibre for that model.

Scope power limited to 25X. Higher powered variables to be set at 25X and taped.

Muzzle brakes are NOT permitted. If factory fitted and not readily removable they must be sleeved to make them non-functional.

Rifles may be shot from sand-bag type rests or from a bi-pod. Magazines, where fitted, may NOT be loaded. All shots to taken from single loading only.

Conduct of matches as per normal 'Fly' rules.

Specialist Makers (incomplete list) –

HS Precision, Robar, Christensen, Cooper, McMillan, etc

Use your imagination – if it is uncommon then it will probably find it's way onto the list.
